

MOJO BARRIER 45° POSITIVE CORNER, BLACK [GREEN]

The MOJO 45° Positive Corner Barrier—known as the “Green” corner—creates sharp, well-defined angles in crowd control setups, ideal for concerts and festivals.

SKU: 1002023 | **Categories:** [Concert Barricades](#), [Crowd Control](#)

PRODUCT DESCRIPTION

The **MOJO Barrier 45° Positive Corner**, also called the "Green" corner, is engineered to create sharp, structured angles in barricade systems, making it ideal for concerts, festivals, and large-scale events that demand precise crowd control. With a 45° angle, it forms well-defined corners to safely direct crowd flow away from key areas like the stage.

This corner features a full floorplate and single rear brace, providing strong stability, even in high-pressure areas. The **black aluminum frame** blends into the event layout, while the **silver base plate** offers durability and a stable foundation.

Designed for fast assembly, the 45° angle is perfect for sharp turns in barricade lines, particularly around stage edges, backstage areas, and pathways. Lightweight and easily transportable, it connects seamlessly to other MOJO barriers with a single-bolt interlocking system for a stable, continuous barricade line.

TECHNICAL INFORMATION

Weight	46 lbs
Color	Black
Angle	45° positive for creating sharp corners and secure layouts
Material	Welded aluminum frame, black finish with silver floorplate
Compatibility	Fully compatible with other MOJO barricades for seamless integration
