

MOJO BARRIER 22.5° POSITIVE CORNER, BLACK [PINK]

Known as the "Pink" 22.5° Positive Corner, this MOJO Barrier in black seamlessly integrates with straight barricades to create smooth angles for enhanced crowd control.

SKU: 1002021 | **Categories:** [Concert Barricades](#), [Crowd Control](#)

PRODUCT DESCRIPTION

The **MOJO Barrier 22.5° Positive Corner**—also known as the “Pink” Corner—is crafted to create smooth transitions in barricade lines, making it ideal for concerts, festivals, and large events. The positive angle directs the crowd away from the stage for secure, organized flow, while maintaining the strength and durability of standard MOJO barriers.

This corner features a full floorplate, a double rear brace for enhanced stability, and a rear step for quick security access. The **black aluminum frame** integrates subtly into the event setup, and the **silver base plate** ensures long-lasting durability. The 22.5° angle is perfect for shaping barricade layouts around complex setups like catwalks, thrusts, and round stages.

Built for rapid assembly, this MOJO 22.5° Positive Corner uses the same interlocking system as straight barriers and connects securely with a single bolt, allowing for quick setup.
