

MOJO HIGH FENCE FLEX, BLACK, MULTIPLEX

The MOJO High Fence Flex is an adjustable extension for the MOJO Barrier Flex Corner, with durable black multiplex panels for secure, curved event layouts.

SKU: 1004377 | **Categories:** [Concert Barricades](#)

PRODUCT DESCRIPTION

The MOJO High Fence Flex is specifically engineered to integrate with the MOJO Barrier Flex Corner, providing an adaptable solution for secure, curved crowd control setups at concerts, festivals, and other large-scale events. With adjustable multiplex panels, the Flex variant raises the height of the MOJO Flex Barrier to 7.87 feet, offering additional privacy and crowd management capabilities in high-traffic or sensitive areas.

Available in black, white, and transparent, the High Fence Flex panels cater to different aesthetic needs. The black and white panels offer a complete sightline kill, blocking visibility and creating private spaces for VIP zones and restricted sections. The transparent polycarbonate option allows security personnel to maintain visual oversight without sacrificing strength or stability, making it ideal for crowd management requiring both privacy and visibility.

Designed for quick and secure assembly, the MOJO High Fence Flex connects seamlessly with other MOJO barrier elements using a standard interlocking system. It's built to withstand heavy crowd pressure and adapts precisely to curved or irregular layouts, making it essential for event organizers managing complex spaces with high-security requirements.
