

**INTERLOCKING STEEL CROWD CONTROL BARRIER WITH SLOPING BASE, 8FT  
2IN**

Heavy-duty steel barriers with sloping bases for secure and safe crowd management.

**SKU:** 1002343 | **Categories:** [Crowd Control Barriers](#)

## PRODUCT DESCRIPTION

Our steel crowd control barriers with sloping bases are designed for enhanced safety in areas with high foot traffic. The sloping base minimizes tripping hazards, making these barriers perfect for festivals, stadiums, public events, and sporting events like cycling and running races. In sports events, the sloping base offers athletes more space at start and finish areas, ensuring their safety while allowing spectators to get closer to the action. Constructed from high-quality galvanized steel, these barriers are built to last and withstand heavy use. The interlocking design allows for quick setup and ensures the barriers remain securely connected, while their lightweight design makes transport and repositioning simple.

## TECHNICAL INFORMATIONS

<b>Weight</b>	22.05 lbs
<b>Dimensions</b>	98.43 × 43.31 in
<b>Pole Height</b>	29.33in
<b>Material</b>	Galvanized Steel
<b>Feet Type</b>	Sloping base for reduced trip hazards
