

LD ROLLS HEAVY-DUTY FLOORING

NO PICTURE AVAILABLE

Lightweight, modular drivable flooring for temporary use at events and construction sites.

SKU: 1234567 | **Categories:** [Event Flooring & Ground Protection](#), [Heavy Duty Drivable Flooring](#)

PRODUCT DESCRIPTION

The LD Rolls Drivable Flooring system is an efficient and lightweight solution designed for temporary access and ground protection at events, construction sites, and industrial environments. Constructed from durable strand-cast aluminum, LD Rolls provide a smooth, slightly textured surface that is suitable for both pedestrian traffic and light vehicles like forklifts. The modular rolls can be quickly and easily installed, offering a versatile and portable flooring system that ensures both safety and convenience.

Each roll spans over 65 feet, making LD Rolls ideal for covering large areas quickly. The low material thickness minimizes tripping hazards while distributing loads evenly across surfaces like turf, parking lots, and gravel. For additional surface protection, optional rubber mats or geotextiles can be placed underneath the rolls, ensuring minimal damage to sensitive areas such as stadium grass or cobblestone.

LD Rolls are perfect for creating temporary access routes, parking areas, and walkways, offering a highly flexible solution that can be easily transported and installed without specialized equipment.

TECHNICAL INFORMATIONS

Dimensions	787.4 × 118.11 × 0.79 in
Weight	2,678 lbs per 65 ft roll
Material	Strand-cast aluminum
Capacity	Suitable for light to moderate vehicle loads
