

TERRAFLOR[®] LAWN PROTECTION FLOORING

Terraflor panels offer versatile protection for natural and synthetic grass, ensuring safe, damage-free surfaces during events with light to medium traffic.

SKU: 1001450 | **Categories:** [Event Flooring & Ground Protection](#), [Turf and Surface Protection](#)

PRODUCT DESCRIPTION

The Terraflor[®] Lawn Protection Flooring system provides a robust, translucent ground cover that shields delicate surfaces from damage. Its design allows light and air to pass through, ensuring the grass continues to photosynthesize, making it ideal for long-term use on natural turf. The anti-slip surface with raised air holes prevents liquid build-up while maintaining airflow, protecting both natural and synthetic turf during events.

The panels feature an integrated anti-slip surface with raised air holes, allowing grass to breathe while preventing liquids from seeping through. Weighing just 68.34 pounds per panel, Terraflor can be easily handled and installed by two people, making it highly efficient for covering large areas quickly.

The panels connect securely through an ingenious locking system, and an area of 8,000 square meters can be covered by a 20-person crew in 8-10 hours. Designed to handle light to medium loads, Terraflor is ideal for protecting event grounds from pedestrian traffic and light equipment .

TECHNICAL INFORMATION

Weight	68.34 lbs
Dimensions	88.58 × 1.38 × 59.06 in
Material	high-density polyethylene (HDPE)
Color	Translucent
