

TERRAPLAS[®] LAWN PROTECTION FLOORING

Terraplas Lawn Protection Flooring provides high-quality turf protection for light to medium loads, available in feet and no feet versions to suit different stadium and event needs.

SKU: 1004343 | **Categories:** [Turf and Surface Protection](#)

PRODUCT DESCRIPTION

The Terraplas Lawn Protection Flooring is a versatile turf protection system designed to safeguard natural grass during events. Its translucent material allows light, air, and water to reach the turf, ensuring that the grass remains healthy even during extended coverage. The panels feature a non-slip surface and a secure interlocking system for quick and easy setup without the need for special tools.

With two available versions—one with rounded feet for optimal grass protection and one without feet for North American stadium standards—Terraplas provides tailored solutions for a variety of venues. The lightweight design of the panels allows them to be installed by hand, making setup fast and efficient. Pre-assembled in 79in x 79in segments, they can be easily laid over large areas with minimal effort.

Built to withstand a wide temperature range of -20°C to +50°C, Terraplas panels are suitable for use in diverse climates and weather conditions, making them ideal for year-round events.

TECHNICAL INFORMATION

Weight	110 lbs
Dimensions	79 × 2.5 × 79 in
Material	High-density polyethylene (HDPE), UV-stabilized
Load Capacity	Supports medium traffic, including pedestrians and light vehicles
